

Petri dishes, polystyrene

Fisherbrand

- Extremely flat with excellent optical qualities and non-distorting below 75°C

Aseptic production

- Recommended for bacterial applications
- Melting temperature of the raw material is approximately 250°C
- Sufficient to destroy bacteria
- Packed under very strict aseptic conditions

Sterile by irradiation

- Recommended for microbiological tests
- A yellow label is stuck on each case that turns red after sterilisation

Contact dishes, sterile by irradiation

- For environment control when determining global germ contamination of surfaces such as skin, kitchens and surgical rooms, refrigerated food presentation islands, etc.
- Flat bottom with a 10mm x 10mm numbered grid marked 1 to 4 and A to D for easy calculation of the colony units per cm²
- The grip lid dish has a lid which remains on the dish during transport to and from the field and during drop accidents, it also limits contamination risks which could occur during transport
